Table of Contents

Chapter 1: Introduction to the TI-83/84 Plus 1-1

Basics of the TI-83/84 Plus 1-1

Using the TI-83/84 Plus 1-1
- Storing Data 1-1
- Typing in a List 1-2
- Typing Data into a Generic List 1-2
- Typing in a Named List 1-3
- Removing a List from the Stat Editor 1-4
- Sorting Data in a List 1-4

Graph Windows 1-5

Chapter 2: Methods for Describing Sets of Data 2-1

Graphical Methods for Describing Quantitative Data 2-1
- Example 2.2 Graphing a Quantitative Variable– The "Water-Level Task" 2-1
- Exercise 2.28 Constructing a Relative Frequency Histogram 2-6
- Exercise 2.29 Constructing a Frequency Histogram 2-10

Numerical Measures of Central Tendency 2-11
- Example 2.3 Computing the Sample Mean 2-11
- Exercise 2.55 Calculating Summary Statistics 2-12

Numerical Measures of Variability 2-13
- Example 2.9 Computing Measures of Variation 2-13

Methods for Detecting Outliers: Box Plots 2-14
- Example 2.16 Computer-Generated Box Plot 2-14
- Exercise 2.132 Constructing Side-by-Side Box Plots 2-17

Graphing Bivariate Relationships 2-19
- Exercise 2.147 Constructing a Scatterplot 2-19

Chapter 3: Probability 3-1

Events, Sample Spaces and Probability 3-1
Example 3.7 Using the Combinations Rule–
Selecting 5 Movies from 20 3-1

Some Additional Counting Rules (Optional) 3-2
Example 3.27 Applying the Permutations Rule–Driving Routes 3-2
Example 3.30 Applying the Combinations Rule–
Selecting Soldiers for a Mission 3-3

Chapter 4: Discrete Random Variables 4-1

Expected Values of Discrete Random Variables 4-1
Example 4.8 Finding μ and σ –Skin Cancer Treatment 4-1

The Binomial Random Variable 4-2
Example 4.10 Deriving the Binomial Probability Distribution–
Passing a Physical Fitness Exam 4-2

The Poisson Random Variable 4-3
Example 4.14 Finding Poisson Probabilities–Whale Sightings 4-3

Chapter 5: Continuous Random Variables 5-1

The Normal Distribution 5-1
Example 5.3 Using the Standard Normal Table to find $P(-z_0 < z < z_0)$ 5-1
Example 5.4 Using the Standard Normal Table to find $P(z > z_0)$ 5-2
Example 5.5 Using the Standard Normal Table to find $P(z < z_0)$ 5-2
Example 5.7 Finding a Normal Probability–Cell Phone Application 5-3
Example 5.9 Using Normal Tables in Reverse 5-4
Example 5.11 Using Normal Tables in Reverse –
College Entrance Exam Application 5-5

Descriptive Measures for Assessing Normality 5-5
Exercise 5.59d Constructing a Normal Probability Plot 5-5

Chapter 6: Sampling Distributions 6-1

The Sampling Distribution of $\bar{x}$ and the Central Limit Theorem 6-1
Example 6.8 Application of the Central Limit Theorem–
Testing a Manufacturer's Claim 6-1
Exercise 6.31 Application of the Central Limit Theorem 6-2
Exercise 6.45 Is Exposure to a chemical in Teflon-coated
Cookware Hazardous? 6-4

Chapter 7: Inferences Based on a Single Sample 7-1

Confidence Interval for a Population Mean: Normal (Z) Statistic 7-1
Example 7.1 Estimating the Mean Hospital Length of Stay, σ Known 7-1

Confidence Interval for a Population Mean: Student's t-Statistic 7-2
Example 7.5 A Small Sample Confidence Interval for μ –
Destructive Sampling 7-2

Large Sample Confidence Interval for a Population Proportion 7-4
Example 7.7 Large Sample Confidence Interval for p–
Proportion Optimistic About the Economy 7-4

Chapter 8: Inferences Based on a Single Sample 8-1

Test of Hypothesis about a Population Mean: Normal (Z) Statistic 8-1
Examples 8.3 & 8.4 Setting up and Conducting a Hypothesis Test for μ –
Mean Drug Response Time 8-1

Test of Hypothesis about a Population Mean: Student's t-Statistic 8-3
Examples 8.7 & 8.8 A Small-Sample Test for μ –
Does a New Engine Meet Air-Pollution Standards? 8-3

Large Sample Test of Hypothesis about a Population Proportion 8-5
Examples 8.9 & 8.10 A Hypothesis Test for *p*—
Proportion of Defective Batteries 8-5

Chapter 9: Inferences Based on Two Samples 9-1

Comparing Two Population Means: Independent Samples 9-1
Example 9.1 A Large – Sample Confidence Interval for ($\mu_1 - \mu_2$) 9-1
Examples 9.2 & 9.3 A Large-Sample Test for ($\mu_1 - \mu_2$) 9-3
Example 9.4 A Small-Sample Confidence Interval for ($\mu_1 - \mu_2$) 9-4

Comparing Two Population Means: Paired Difference Experiment 9-6
Example 9.5 Confidence Interval for μ_d :
Comparing Mean Salaries of Males and Females 9-6

Comparing Two Population Proportions: Independent Samples 9-9
Example 9.6 A Large-Sample Test about ($p_1 - p_2$):
Comparing Fractions of Smokers for Two Years 9-9

Comparing Two Population Variances: Independent Sampling (Optional) 9-10
Example 9.10 An F-Test Application:
Comparing Weight Variations in Mice 9-10
Example 9.12 Checking the Assumption of Equal Variances 9-12

Chapter 10: Analysis of Variance 10-1

The Completely Randomized Design: Single Factor 10-1
Example 10.4 Conducting an ANOVA F-Test—
Comparing Golf Ball Brands 10-1
Exercise 10.26 Completing an ANOVA Table and
Conducting an ANOVA F-Test 10-3

Chapter 11: Simple Linear Regression 11-1

Fitting the Model: The Least Squares Approach 11-1
Exercise 11.28 Sweetness of Orange Juice 11-1

The Coefficients of Correlation and Determination 11-3
Example 11.4 Relating Crime Rate & Casino Employment 11-3
Exercise 11.121 Feeding Habits of Fish 11-6

Chapter 12: Multiple Regression and Model Building 12-1

Model Building: Quadratic and Other Higher Order Models 12-1
Example 12.7 Analyzing a Quadratic Model 12-1

Residual Analysis: Checking the Regression Assumptions 12-4
Example 12.15 Using Residuals to Check Equal Variances 12-4

Chapter 13: Categorical Data Analysis 13-1

Testing Categorical Probabilities: One-Way Table 13-1
Example 13.2 A One-Way χ^2 Test--
Effectiveness of a TV Program on Marijuana 13-1

Testing Categorical Probabilities: Two-Way (Contingency) Table 13-3
Example 13.3 Conducting a Two-Way Analysis:
Marital Status and Religion 13-3
Exercise 13.31 IQ and Mental Retardation 13-6
